

Multiple Access Remote Control System

1.Vari-light

A single flap damper system allows full control of the amount of daylight entering the room. 3 buttons on the remote - OPEN, CLOSE & STOP give you the option of setting the exact amount of daylight you want.

2.Power Kit-Exhaust Fan

Designed for use in bathrooms, toilets etc. allowing for the extraction of air from the room through the Sky Tunnel system. Two buttons on the remote for the fan - ON & OFF.

3.Electric light

A low voltage (12V) lighting system may be installed inside the Sky Tunnel for night time use. This is not the electric light shown in this brochure but may be able to be purchased locally. Two buttons on the remote for the light - ON & OFF

The system uses a "Learning" type remote allowing single or multiple units to be controlled by the one handheld remote control - the choice is yours.

The Receiver Input is 12V and the maximum load is 70W. The Exhaust Fan draws 18W, the Vari-light pulls 2W, and an LED Lighting System should be about 20-30W. The transformer input is 110V-240V, 50/60hz.

Applications
