

Attic Parts

Rigid98 Tubing is recommended for almost all commercial applications. The superior performance of this tubing ensures you get the maximum performance where you need it. Rigid98 Tubing is used in all commercial applications with no ceilings such as warehouses, factories, gymnasiums etc. Flexi-Tube is predominantly used in residential applications. In commercial applications the use of Flexi-Tube is in areas where higher luminance levels are not required such as toilets, change rooms, locker rooms etc.

Rigid98 Tube

SKY TUNNEL's Rigid98 Tubing is fabricated from Miro-Silver, a premium quality aluminum product manufactured by ALANOD in Germany. MIRO - SILVER, the next generation, has a total reflectivity of 98%. Normal anodized aluminum lighting grades have total reflectivity of up to 87%. To increase or enhance this total reflectivity to a higher level, several nanometer-thin optical coatings must be applied to the aluminum surface in a vacuum. MIRO-SILVER delivers high efficiency luminance with little light transmission loss and the light stays completely white with no color spectrum shift - even after numerous reflections. It is also extremely durable and will not fade or lose reflectivity.

MIRO-SILVER® Layer System

Flexi-Tube™

The Flexi-Tube™ pipe system can be used in applications with a length of up to 3 meters. It can provide up to 86% reflectivity and is cost-effective as an alternative to Rigid98. Sky Tunnel™ with Flexi-Tube™ pipe system is very easy to install, and with the possibility of flexibility, roof parts and ceiling parts can be installed in the center of the freak, ignoring the obstacles in the attic. Made using the highest quality material, the Flexi-Tube™ has been in use for 20 years and its quality stands the test of time.
